

Reggie Spivey is the chief operating officer (COO) at Tec-Masters, Inc. He is well known for his significant contributions to space exploration and the aerospace engineering community. Spivey's career began at Teledyne Brown Engineering (TBE) in 1988, where he worked on the strategic defense initiatives (SDI), Spacelab and International Space Station (ISS) programs.

Reggie joined Tec-Masters for the first time in 1994, where he led the development and operation of key Spacelab experiments and the first two investigations that operated in the Microgravity Science Glovebox (MSG) on the ISS. These investigations were the solidification using a barrel in sealed
